

# ABRASIVE – A BAD IDEA?

THE NEW AIR-FLOW® POWDER PERIO DOES AWAY  
WITH MISCONCEPTIONS – AND WITH HARMFUL BIOFILM

With a grain size of ~25 µm, the Original Air-Flow Powder Perio is extra-fine. In addition, the grains have a particularly low specific density.

As a result, the Original Air-Flow Method is effective from the gingival crest to the deepest periodontal pockets. In other words, it also acts where, under the cover of biofilm, billions of bacteria proliferate in subgingival areas to perform their destructive work.

## ABRASIVE – A GOOD IDEA!

When used in conjunction with the Perio-Flow handpiece of the new Air-Flow Master or with the Air-Flow handy Perio with its Perio-Flow nozzle, this newly developed powder is perfect for subgingival prophylaxis.

The Original Air-Flow Powder Perio removes harmful biofilm – without any adverse effects on the tooth surface.

Biofilm is gone. A misconception is laid to rest. For the benefit of your practice and your patients.

120 g bottle

## AIR-FLOW KILLS BIOFILM

- > Microorganisms proliferate and grow – the breeding ground develops its own protective layer – bacteria then separate and colonize additional areas.
- > Biofilm protects bacteria from drug therapy.
- > The immune defenses of the body are powerless. In order to prevent a bacterial invasion, the body triggers a process which breaks down bone tissue.
- > Implant patients are equally affected by biofilm. Periimplantitis leads to the loss of implants.

Biofilm ...

... removal – right

... removal – wrong
